Introduction

ARTEMIS TOKEN ($ARMS) is a decentralized finance (DeFi) token that functions on the Ethereum network using the standard ERC-20. One of the token's primary attributes is an automatic reflection system, which provides ARTEMIS holders with a percentage of transaction fees via an auto-staking mechanism. Specifically, 0% of transaction fees are automatically distributed among all ARTEMIS holders as part of the staking process. Additionally, the ARTEMIS TOKEN incorporates a 0% passive burn function that contributes to the token's price stability. (All fees have been eliminated to attract new investors and eliminate any confusion. These fees are gone forever and will not be reinstated.)

Overview

The ARTEMIS TOKEN ($ARMS) is a DeFi token functioning on the Ethereum network, designed to provide its holders with a unique and innovative set of features. The token's automatic reflection system enables ARTEMIS holders to receive a percentage of transaction fees, which is distributed among all ARTEMIS holders through an auto-staking mechanism. This feature enhances the token's value proposition, as holders can accumulate more tokens simply by holding them.

Furthermore, the ARTEMIS TOKEN incorporates a 0% passive burn function, which guarantees price stability for the token. This function works by removing a percentage of the total token supply from circulation, thereby reducing the overall supply and increasing the token's scarcity. The resulting effect of this mechanism is to maintain the token's value, making it an attractive investment option for holders.

Tokenomics

Ticker: $ARMS
Token Type: ERC-20
Total Max Supply: 1Q $ARMS
Transaction Fee: 0%
Passive Burn: 0%

Automatic Reflection System

The ARTEMIS TOKEN's automatic reflection system ensures that holders receive a percentage of transaction fees. Every time a transaction is made, 0% of the fee is automatically distributed among all $ARMS holders through an auto-staking mechanism. This feature incentivizes holders to hold onto their tokens, as they can accumulate more $ARMS simply by holding them.

Passive Burn Function

The ARTEMIS TOKEN's passive burn function contributes to the token's price stability by reducing the total supply of tokens in circulation. 0% of every transaction fee is burned, meaning that these tokens are removed from circulation permanently. This mechanism increases the token's scarcity, which in turn maintains its value and makes it a more attractive investment option for holders.

Use Cases

The ARTEMIS TOKEN can be used for a variety of purposes, including but not limited to:

1. Governance: Holders of $ARMS can participate in the governance of the ARTEMIS ecosystem, including voting on proposals and decisions that impact the token's future.
2. Trading: The token can be traded on various decentralized exchanges (DEXs) and centralized exchanges (CEXs), providing holders with liquidity and the ability to profit from trading.
3. Staking: Holders can stake their $ARMS to earn rewards, including more $ARMS or other tokens, depending on the staking pool they participate in.

Conclusion

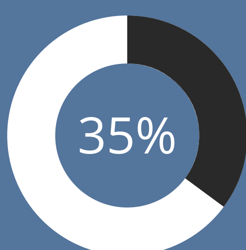
The ARTEMIS TOKEN ($ARMS) is an innovative DeFi token operating on the Ethereum network, providing holders with a unique set of features that enhance its value and stability. Its automatic reflection system and passive burn function make it an attractive investment option for holders seeking to benefit from the growth potential of the DeFi space while enjoying the benefits of a stable investment.

Ecosystem

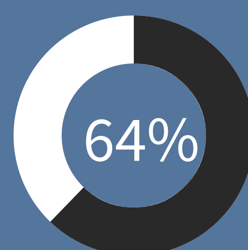
Artemis is a decentralized token on the Ethereum blockchain.

Unlike other coins only dedicated to farming and liquidity pool acquisition, it aims to develop a cross-blockchain bridge, integrated crypto wallet and flexible payment system.

ARTEMIS TOKEN



With Artemis, 2% is redistributed to all the coin holders as part of the Automatic Staking. We do this to reward our holders and the Ethereum blockchain is the best place to do it.



0% of transaction fees are burned, meaning that these tokens are never removed from circulation.

Benefits

No Hardware Required

Unlike PoW, PoS requires no equipment or hardware, nor the associated hardware and maintenance costs.

Great Passive Income

Every time a transaction is made, 0% of the fee is automatically distributed among all $ARMS holders.

Eco - Friendly

Artemis is helping the environment by cutting down on high-energy efficient platforms such as Ether. Holding the token is more economical and eco-friendly than mining and staking other cryptocurrencies.

Scalable

Calability refers to a computational process in the blockchain world that involves handling a huge amount of throughout. PoS protocols, as shown by Artemis lower fees and high transaction outputs.
